Muzaffer Nizam

Sr. Hardware Design Engineer

Location	: Antalya, TURKEY
Age	: 35
Phone	: +90 536 222 90 10
Mail	: muzaffernizam@gmail.com

TOTAL EXPERIENCE (7 Years 4 Months)

Visa Statement (About Scale-Up Visa)

Unlike other work visas under company sponsorship, scale-up allows companies to recruit with a 6-month employment commitment. Likewise, the person who is offered a job is granted a 2-year residence permit.

Afterwards, the visa can be extended for 3 more years by meeting the criteria in the process, and at the end of 5 years, an indefinite residence permit can be obtained.

It is stated that applications accepted only online are finalized in 3 weeks from outside the UK and 8 weeks from within the UK.

If I am accepted by your company, I can start working in your company in as soon as possible.

Personal Statement

Before I started to Engineering Study, I quit my Mathematics education. I realized that if I am an engineer I can solve more mathematics problems. So it happened too. I love creating a solution for any problem not only working life but also all real life.

I have always wondered new things and explored to create a solution to new challenges. I am married not only to my wife but also to my job. For instance i have always helped her make the right decisions when a colleague was about to make the wrong decision at work. I've never been perfect, but I've always tried to do great things. I have always pursued real truths, not my own truths. I have always tried to apply the real truths. In the future, I will always continue to pursue the real truth in my works.

I have never been egotistical. I've always been tolerant. Maybe good things can be done alone, but more great things can be achieved with teamwork.

I am ready to new role and new life. So are your company ready to run with me?

Education

Bachelor's of Science, Electrical & Electronics Engineering   **Oct. 2016**
Akdeniz University

What do I do while Hardware designing;

→ I am using Kicad, Altium and Eagle EDA programs in Hardware Designs but generally prefer Kicad.
→ Pin assignment according to role such as communicating, input, output, PWM, Analog etc.
→ Design Compliant with IPC2221 Electrical Conductor Spacing Standards and EMC Standards,
→ Design Compliant with different density Via dimensions of IPC-2221,
→ Design Compliant with different Environmental Temperatures and Pressures Track width
→ Multi layer PCB Designs 2,4 and more Layers,
→ Flex and Poly-amide PCB Design,
→ Design compliant with BGA components
→ Choosing different temperatures density PCB Materials such as FR-4 TG 130-140, TG 170 etc,
→ Various Analog and Digital Circuit Design with 32 bits ARM Core and 8 bits STM 8 Core MCUs such as STM32xx, CC13xx Ti, TM4Cxx Tiva Series MCUS, NXP MCUs etc.
→ Power Circuit Designs Such as Switching Regulators, Switching Controllers
→ Motor Control Drivers Designs such as Brushed DC, BLDC, PMSM etc
→ Digital Designs SPI, I2C, DAC, RS485, UART, Ethernet, CAN Bus,
→ Wireless Communication Designs GSM, GNSS, Bluetooth, RF Sub 1 Ghz, Wifi,
→ System Modelling, simulating and analyzing with Matlab Simulink,
→ Analog Designs ADC, DAC, FSK Communication on Power Line, various OP-AMPS Gain Calculating, Analog Filters Designs,
→ Simulates with Spices, Measurements with Oscilloscopes end Reports
→ Environmental Test such as Temperature test, Pressure Test, ESD Gun Test,
→ Creating PBA and PCB Production Files, Gerber Files, Pick and Places Files, DXF and Step files for Mechanical Designs,
→ Layer Stack Management,
→ Controlling with GERBV (free Gerber viewer)
→ Prepare Bill of Materials List.
→ Version Control with github.
→ Short Circuit Testing,
→ Voltage Level Testing,

What do I do while Firmware designing;

→ Code Generations with STM32CubeIde,
→ Low level driver preparing such as below,
→ UART/USART Communication Firmware Testing,
→ Can Bus Communication Firmware Testing,
→ SPI, I2C and RS485 Communication Firmware Testing,
→ ADC Input Firmware Testing,
→ DAC Output Firmware Testing,
→ PWM Generation Firmware Testing,
→ General Input detect and Output Control Check Firmware Testing even including Interrupts,
→ Hardware Verification with Firmware.

Interested In Below;

→ VHDL Design,
→ Motor Control Applications with FOC algorithms,
→ PID algorithms,

JOB EXPERIENCES

1- Electrical & Electronics Engineer Intern (3 Months)   June 2013- September 2013

Company: Turkcell Communication A.Ş.
Website: **https://www.turkcell.com.tr/**
Job Type: Intern / Full Time
Reason for Leaving: Intern Finished
Job Deification:

● GSM Base Station Location Planning,
● Various Technical Calculating,
● Field operations.

2- Electronics R&D Engineer (2 Years 4 Months)   August 2015- October 2017

Company: Desird Tasarım Arge Uygulama Elekt. Des. İth. İhr. San LTD ŞTİ
Website: https://desird.com/
Job Type: Permanent/Full Time
Reason for Leaving: Military Status
Job Deification:
Hardware Designed below projects;
- Biomedical Electronic Card Designs
- Elevator DC Door Control Driver Board Designs
- IOT Card Designs
- Telemetry Card Designs communication with FSK on DC Power Line
- Main Board Designed which is communicating with Telemetry Cards,
- Test Machine Design contains with Pogo Test Probe Tips
- ➢ In addition in relevant projects doing Hardware Designs(Schematic and PCB), Measuring, Reports and Tests,
- ➢ Designed with STM32xx, CC13xx Ti MCU's, PIC18xx MCU's

3- Electronics R&D Engineer (2 Years 10 Months)   May 2018- February 2021

Company: Desird Tasarım Arge A.Ş. (Same Company previous one, but Commercial Title of Company changed)
Website: https://desird.com/
Job Type: Permanent/Full Time
Reason for Leaving: Resignation
Job Definition:
Hardware Designed below projects;
- Elevator BLDC Door Control Driver Board Designs
- IOT Card Designs
- Test Equipment Design contains with Pogo Test Probe Tips
- Railway BLDC Door Control and Safety Boards which has Safety Relay and compatible relevant SIL Certificate,
- ➢ In addition in relevant projects doing Hardware Designs(Schematic and PCB), Measuring, Reports and Tests,
- ➢ Designed with STM32xx, STM8xx, NXP MCU's, PIC16xx MCU's

4- Electronics R&D Engineer (1 Years 2 Months)   February 2021- April 2022

Company: Ake Elevator and Escalator LTD
Website: https://ake.com.tr/
Job Type: Permanent/Full Time
Reason for Leaving: Company created another Company as for Electronics R&D called Acri Industrial LTD ŞTİ
Job Definition:
Hardware Designed below projects;
- Elevator DC Door Control Driver Board Designs
- Remote control with GSM Communication Card Designs
- Various Elevator Control Boards Designs,
- Water Vending Control Boards Designs,
- Elevator Main Control, Cabin Buttons Boards, Top and Bottom of Cabinet Boards, Floor Calling Boards which is communicating with CAN Bus and DC and AC signal Lines,
- ➢ In addition in relevant projects doing Hardware Designs(Schematic and PCB), Measuring, Reports and Tests,
- ➢ Designed with TM4Cxx Ti, MSP432xx ARM Core, MSP430xx Ti

5- Electronics R&D Engineer (9 Months)

Company: Acri Industrial LTD ŞTİ
Website: https://www.acritechnology.com/
Job Type: Permanent/Full Time
Reason for Leaving: Low Salary and Economic Problems in Turkey, Turkish Lira currency lose, Inflation on Turkey.
Job Definition:

Hardware Designed below projects;

- Elevator DC Door Control Driver Board Designs
- Remote control with GSM Communication Card Designs
- Various Elevator Control Boards Designs,
- Elevator Main Control, Cabin Buttons Boards, Top and Bottom of Cabinet Boards, Floor Calling Boards which is communicating with CAN Bus and DC and AC signal Lines,
- Test Machine Design contains with Pogo Test Probe Tips
- In addition in relevant projects doing Hardware Designs(Schematic and PCB), Measuring, Reports and Tests,
- Designed with TM4Cxx Ti, STM32xx,

Personal Design Project and designed by me;

- It is called STM32 Mega Development Board
- Contains Technologies as a below;
  - ✓ 24V AC or DC Power Input,
  - ✓ 2 different Switching Regulator GSM and General System Power as 4.3V and 5V,
  - ✓ Controlling GSM Power with XOR Gate and Transistor,
  - ✓ Analog Bus Voltage Read with Buffer op amp,
  - ✓ DAC Output,
  - ✓ Voltage levels are 24V, 15V, 5V, 4.3V,3.3V,
  - ✓ USART communication with USB Mini also contains Programming,
  - ✓ CAN Bus Communication,
  - ✓ RS485 Communication,
  - ✓ SPI and I2 Communication connected to Connectors,
  - ✓ SD Memory Card communicated with SPI Interface,
  - ✓ 16x2 Character LCD Display communicated with I2C Interface,
  - ✓ FLASH Memory communicated with I2C Interface
  - ✓ Non-Isolated Signal Input,
  - ✓ Darlington Output with ULN2004 IC,
  - ✓ Linear Potentiometer Analog Read,
  - ✓ Between Range of 0V to 600V DC Voltage Read with op amp,
  - ✓ Between Range of 0-10A Current Read with op amp,
  - ✓ Short Circuit Detection,
  - ✓ DC and BLDC Motor Control Driver Circuit with Back EMF Current Reading,
  - ✓ Encoder Input (Absolute and Incremental)
  - ✓ 16 Channel Isolated Input detected with Shift Register Input,
  - ✓ Accelerometer (ADXL345 IC) communicated with SPI,
  - ✓ 4 Buttons for LCD Controlling,
  - ✓ 24V Relay Output (SPDT 1 FORM C),
 - ✓ SIM800C GSM Modul communicated with SPI Interface

Figure 1 : STM32 MEGA Development Board

Foreign Language
✓ English Level : B2-Upper Intermediate (Preparing School of University & English Culture Course in Antalya)

Certificates
✓ Safety Integrity Level for RAILWAY SYSTEM ELECTRONICS - **TUV NORD**   April 2019
✓ Humanoid Robots Industrial Automation - **ENTEK EDUCATION TECH.**   December 2012

Hobbies
● Latin Dances Salsa & Bachata
● Taking Photo
● Cats and Dogs
● Flying a Kite
